👤 PROFILE

Computer Science graduate and Full Stack .NET Developer with experience in building web applications and RESTful APIs using **ASP.NET** & Core. Currently working with Zain Jordan in Telecom Charging & Billing, where I contribute to telecom service and package management, billing processes, and database analysis. Passionate about backend development, continuous learning, and delivering reliable software solutions.

🎓 EXPERIENCE

Charging & Billing - Zain Jordan

05/2026 – Present

- Gained hands-on experience in Telecom Charging and Billing systems within a large-scale telecommunications environment.
- Configured and managed telecom packages, services, and offers based on business requirements.
- Participated in creating and maintaining billing configurations for Zain telecom services.
- Used SQL to retrieve, analyze, and validate subscriber and service-related data.
- Participated in testing and validating charging behavior for telecom services and packages before deployment.
- Developed a strong understanding of how charging systems interact with billing, provisioning, and customer management systems.
- Worked with business-critical systems processing high volumes of subscriber transactions and usage events.

Full Stack Developer Orange Coding School

02/2026 – 05/2026

- Completed intensive **full-stack development** training using ASP.NET & Core
- Designed and developed scalable **RESTful APIs** using ASP.NET & Core Web API following Clean Architecture principles
- Built and optimized **databases** using **SQL Server and Entity Framework Core** (EF Core)
- Implemented secure **authentication** and **authorization** using **JWT** and role-based access control (RBAC)
- Developed and tested **CRUD** operations with **validation** and structured error handling
- Integrated front-end with backend APIs using **HTML, CSS, and JavaScript**
- Collaborated within **Agile/Scrum teams**, contributing to efficient delivery and clear communication
- Used **Git & GitHub** for version control and **Postman** for API testing and validation

● SKILLS

C# - ASP.NET Core Web API - Entity Framework Core (EF Core) - SQL Server - RESTful APIs
MVC - Authentication & Authorization - Angular - JavaScript - Bootstrap
Docker - Git / GitHub - Postman - Unit Testing - Telecom Charging & Billing

★ PROJECTS

EduScope - Backend Developer

- Designed and developed scalable RESTful APIs using ASP.NET Core Web API following Clean Architecture principles.
- Designed and implemented the complete database schema using SQL Server, including relationships, constraints, and data integrity rules.
- Built and managed the data access layer using Entity Framework Core (EF Core).
- Implemented secure authentication and authorization using JWT and role-based access control (Admin, Trainer, Student).
- Developed core backend modules including session management, agendas, evaluation reports, and data validation.
- Applied best practices in API structure, error handling, and layered architecture.

Booking Management Service - Backend Developer

Technologies - ASP.NET Core Web API, EF Core, SQL Server, DTOs

- Designed and built a RESTful API for resource allocation, user scheduling, and booking management.
- Implemented real-time availability validation, slot overlap prevention, and booking lifecycle management.
- Handled concurrent booking requests using Serializable Transactions to prevent race conditions and double bookings.
- Structured the backend using Service-Controller architecture, EF Core, SQL Server, and DTOs.

Gold Price Tracker - Front-End Developer

- Developed a responsive web interface to display real-time gold prices using HTML, CSS, and JavaScript.
- Integrated external APIs to fetch and dynamically render live data using asynchronous requests (Fetch API).
- Implemented DOM manipulation for real-time updates and interactive user experience.
- Ensured responsive design across multiple devices (mobile, tablet, desktop).
- Focused on clean UI design and performance optimization for faster loading.

E-Commerce Web Application | Full-Stack Project

- Developed a full-stack e-commerce web application using ASP.NET Core Web API and Angular.
- Implemented JWT authentication and role-based authorization with separate Admin and Customer functionalities.
- Built core features including product management, shopping cart, orders, and product reviews.
- Designed and optimized the database using Entity Framework Core and SQL Server.
- Enhanced user experience through search, filtering, and pagination.
